Introducing

THERMICA

by

GUSSI
ITALIA ®

Thermica is a built-in cup holder developed for the marine environments and allows you to set the temperature from Cold (-1°C/30°F) to Hot (55°C/131°F) with just one button.

By using the central button you can activate Thermica as a cooler or heater. The two functions are highlighted with a blue or red LED light respectively. Holding down the central button for two seconds turns Thermica off.
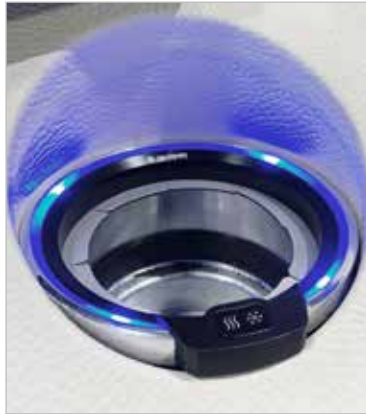

During the transition from hot to cold and reverse, Thermica pauses its functions for thirty seconds in case the button is pressed unintentionally, after which it will start working at the set temperature.

And, did we mention it's waterproof?
